

| error/issue | format / software | clear text problem | how to fix (if possible) |
|------------------------------------|---|--|--|
| ret = -1 | WAD file | Rare error describing a "404"... file/dir was not found | <ol style="list-style-type: none"> 1) Your SD card is not formatted as FAT16/32 properly, reformat it 2) You deleted the file, after you selected it for install or removed the SD card... stop doing shit like this 3) Appears, when there is no "wad" folder on your device (sd:/wad/ or usbO:/wad/) 4) If none of the above fit see "ret = -1022" |
| ret = -1 | DVD backup | No platform found to run at; cIOS missing | You should install a cIOS. It might have been bundled with your backup launching application. If this does not work try an newer/older cIOS revision. |
| ret = -6 | DVD backup / Backup Loader | Application found no way to interpret the DVD: "Could not open disc subsystem" | Install DVDX and/or IOS249 (cIOS) in a proper way. |
| ret = -102 | WAD file | Ticket missing | The WAD you want to install has no ticket and therefore cannot be used. If you are trying to uninstall a WAD, the WAD Manager could not find the ticket on your Wii. However installing the WAD and the uninstall it will work. |
| error 324 | DVD backup | Media issue cIOS issue | <ol style="list-style-type: none"> 1) Don't try to use DVD+R or any RW media. If you need to use DVD+R, you have to change the book type of the DVD to DVD-ROM. You can find various guides on the internet on how to do this. Note: Not every DVD-Recorder is capable of doing book type changes. Indeed some DVD+R media work, but I would prefer DVD-R's. 2) It may also help to update your cIOS. |
| ret = -1016 | any application using Internet connection | Internet connection problem | Go sure your Wii can connect to the Internet. |
| ret = -1017 | WAD file <i>OR</i> cIOS installation <i>OR</i> any installation | ...when uninstalling titles/WADs. Means, that there was no data to remove from the Wii's NAND FS. ...when installing titles/WADs. | <p>Nothing to do here. The problem fixes itself. It's just a hint for you that the WAD you wanted to uninstall wasn't installed correctly before.</p> <p>Here you are missing a trucha capable IOS. Install cIOS to fix this problem or use 'specific tools' to patch an IOS to reenale trucha there.</p> |
| ret = -1022 | WAD file | More or less unknown corruption | <p>There are two known possibilities:</p> <ol style="list-style-type: none"> 1) The WAD file is corrupt for some reason 2) Your SD card is not compatible. According to threads on gbatemp.net, this could be a result of a partly incompatible SD card. Try another one or use USB peripherals. |
| ret = -1029 | WAD file | Error finding capable (c)IOS. | Uninstall cIOS with cIOS Uninstaller or by deleting IOS249 in AnyTitle Deleter. Then install a newer cIOS (rev10+). The WAD should install fine afterwards. |
| ret = -1035 | WAD file | IOS' are blocking the installation during to the fixed trucha signing bug. | This problem has many possible fixes. The most common one is to install a trucha capable IOS16 (IOS16-64-v257-prod.wad) and then use a WAD Manager which was modified to IOS_Reload to IOS16. |
| ret = -1036 | Third party firmware update | IOS problem | Reinstall a patched IOS60 (for System Menu 4.0/4.1). You can use IOS60 installer or a WAD for it. |
| ret = -2011 | WAD file <i>OR</i> cIOS installation <i>OR</i> any installation | Error in finding a trucha capable IOS / IOS selected isn't trucha activated | <ol style="list-style-type: none"> 1) You could downgrade your Wii using some tools to enable the signing bug again <i>OR</i> using other tools, such as TBR or AIDI to enable trucha. Warning: Specific Wii consoles, known as LU64+ Wii's (referring to the serial number) brick when trying to downgrade. Here you must use tools like TBR. 2) Install cIOS or enable signing bug as mentioned at 1). |
| ret = -4100 | WAD file | The SHA-1 hashes given in the .TMD file inside the WAD may be wrong according to the *.APP files bundled with it. | <ol style="list-style-type: none"> 1) If you created the WAD file, you should check the .TMD regarding the hashes (as mentioned). For this, use a Hex-Editor such as XVI32. For more information see following: http://wiibrew.org/wiki/Tmd_file_structure 2) If it's your own WAD, there might be some *.APP files missing, resulting in the same error as above. 3) If it's a downloaded WAD, you can contact the author for help. If you don't know the author, you might search for a different source, since this WAD is simply broken. 4) When the WAD file contains pirated VC or WiiWare title the dump might be corrupt. |
| ret = -4100 | DVD backup | Could not read disc (Note: This error is partly obsolete) | <p>An issue with your burning method. You could try following:</p> <ol style="list-style-type: none"> 1) Do not use no-name DVD manufacturer 2) Avoid using any RW (rewritable) discs (incl. DVD-RAM) 3) If using DVD+R media, you may have to set your DVD type to DVD-ROM manually 4) When using a decrypted (some call it patched) Image do not use special characters in the image's name (i.e. CMD: backup-creator.exe x:\folder\this_game.iso) 5) Your Image might be a bad dump, although this is unlikely |
| black screen / back to System Menu | Virtual Console / WiiWare (most common) | IOS missing | <p>Install the missing IOS.</p> <p>If you need help with finding what IOS is missing I'm willing to help you: Use title lister 249 (requires cIOS) or title lister, and let it create a TITLES.TXT in your SD card root. Then send me an E-Mail with the file attached and a description of your problem (including what app/game has problems).</p> <p>My E-Mail: gamefox949 (think) hotmail (think hard) com</p> |
